

John Mishler

Nationally renowned art sculptor John Mishler specializes in the use of the common metals including aluminum, copper, steel and stainless steel to create both abstract and symbolic works of art.

Many of John's outdoor pieces incorporate kinetic energy and have moving parts that turn with the wind. The "moving sculptures" have become John's trademark. He has works in many public and corporate collections such as ESPN Zone, Andrew Corp. among others. His works are in private collections across the U.S., Canada and the South of France. Many of John's pieces are commissioned.

"As a sculptor, I work mainly in aluminum and stainless steel. I have done many public art commissions, and they are installed across the country. Most of my large scale commissions are kinetic. I like making kinetic sculptures because they are always changing depending on the strength and direction of the wind.

I teach sculpture part time at Goshen College, Goshen, IN. My studio is located in a former boiler building in the Old Bag Factory complex in Goshen."
